## Electronics

Electromagnetic waves  
This revised text covers  
electromagnetic waves  
and fields in great detail.  
It begins with a review  
of static electric and  
magnetic fields,  
providing results useful  
for static fields and time-  
dependent field  
problems in which the  
size of the device is

AA-5 (1994) voltage and current standing waves have been observed along two- and four-turn inductive coils operated at 13.56 MHz. Inductive rf power was used to generate a CHF<sub>3</sub> plasma at 4 mTorr. Data from voltage and current probes installed on each end of the coil were used to derive spatial variations of V
