SELECT - Oracle

Sometimes, you want to query data based on a specified pattern. For example, you may want to find contacts whose last names start with 'St' or first names end with 'er'. In this case, you use the Oracle LIKE operator. The syntax of the Oracle LIKE operator is as follows:

Oracle LIKE Operator: Querying data Based on a Specified ...

In Example 18-9, these empty sequences are not joined with the purchaseorder table, so the overall SQL-query result set has only ten rows. In Example 18-10, these empty sequences are part of the overall result set of the SQL query, which contains 132 rows, one for each of the rows in table purchaseorder. All but ten of those rows are empty, and show up in the output as empty lines.

Using XQuery with Oracle XML DB
In this example the subquery is what you see in lines 5 and 6, so the SELECT from table_B is run first, then the query from table_A is executed using the result set from table_B as the filter criteria, and when execution finishes, the result set from the subquery is discarded.
