The 16-18-gauge wire is hard to bend but holds shape well. The 24-26-gauge wire bends easily but is also easy to damage. When you are just starting out, we recommend investing in a spool of 20-gauge wire and a spool of 26-gauge wire. You will use the 18-gauge wire for most of your projects, and the 26-gauge wire will be handy for embellishments.

The wire guide tool solves this particular problem: it is one metre long and rigid enough to maintain its shape but remains very flexible. The wire is simply hooked around the loop which holds it securely as the wire guide is passed through the box section or behind the trim panel. The tool ' s flexibility lets you guide it past any obstructions.

Laser Tools 7775 Wire Guide Tool

It is normal practice to wire out from the amplifier to the 1st or nearest speaker, and then on to any subsequent speakers. Looping in and out is best practice, although if you need to wire off to an existing circuit, teeing off is perfectly acceptable.
